

# HAVING AN MRI?

DO YOU HAVE ANY OF THESE IN YOUR BODY?

**WHY WE  
NEED TO KNOW  
IF YOU HAVE  
METAL IN OR  
ON YOUR BODY:**

MRI uses a very strong magnet, so metal on or inside your body may be affected or can cause injury. It is very important that you tell your technologist about any device, implant, metal, shrapnel, or foreign object on or inside your body before entering the exam room.
